

In the following pages we can find a comprehensive material for the education of medicinal plants and their usage in practical life. The text could be useful for teachers of primary and secondary schools. However its usage is not only for classwork, it might be applied in practical life as well. It also serves as an informative text of the theme mentioned. This work is primarily focused on Karlovy Vary region.

The text is aimed at the most fundamental terms and notions of folk healing. Then it concentrates on the use of medical plants not only for tea therapy, but also for another processing. In this work you will learn basic information about the cultivation of medical plants and how are they herborized. You will also get acquainted with basic plant races which are growing almost everywhere. Medical plants are also used in liqueur industry. The bestknown brand is Becherovka. This herbal liqueur, which has two hundred-year tradition, is full of mystery.

The basic teaching method in this work is a project. After short common introduction, where is an outline about how to make a project education, there are five elaborated projects with the same theme "medicinal plants".

The aim of this work was to give basic information about medicinal plants. Furthermore there are elaborated school projects, which can be applied in education of natural science and biology in primary and secondary schools. The projects are focused on cultivation and collection of herbs, plant protection, our world-known herb liqueur and on collection of basic medical plants, which are found almost everywhere.
