

Abstract

DEUSOVA, Vendula. *Psychosocial issues of people after stroke and their close persons*. Prague 2021. Diploma thesis. Charles University Prague. Hussite theological faculty. Department of psychosocial sciences and ethics. Head of work Dr. Jirina Ondrusova, Ph.D.

The theme of this thesis is psychosocial issues of people after stroke and close persons, who takes care about them. Theoretical part deals with the characteristics of strokes, risk factors, prevention, symptoms and treatment of ict. It also deals about the consequences rehabilitation of patients after stroke. The thought of how ictus affects and change existing behavior of person, who was affected, but also how affected close persons. Also describes options of formal support, social services, contributions and organizations, which helps to people after CMP. Theoretical chapters are added research part focused on quality in the form of semi-structured interviews with three people after CMP and three people which are close to them, and who takes care about them after ictus, or still they care about them.

The aim of this diploma thesis is describe stroke as disease with serious consequences and summarize options formal support and help for people after ict and their close persons, and through research investigation map changes, which may occur in in people's lives, who strokes already underwent and how much it will affect life of close people who take care about them.
