

For my graduation theses I have chosen the topic „Environmental Aspect of the Life Quality“ A great inspiration for my work was the Association for Ecological Education called Tereza, where I have been working since 2003 as an external instructor for educational programs and free-time activities. The Graduation theses deal with environmental education, ecological educational programs, ecological school projects as well as give summary of ecological educational centres and target the environmental education at schools. The goal of my graduation theses is not just to map environmental thoughts in families, free-time centres and schools, but especially to enhance quality of ecological educational programs, which where offered by Tereza Association.
