

Photography and the world of a man with mental handicap

In the thesis submitted herein, I focus on photography as a hobby of people with mental handicap, as well as, as means of their self-expression and communication with society.

I deal with the basics of leisure time, life-long education and photography.

Further, I present an example of a currently running life-long educational project for people with mental handicap and, as well, my own project supported by EU youth program funds.

As an enclosure, there is a selection of pictures of students of a life-long educational program With Camera To a Knowledge.
