

This paper considers the activity of the prevention methodists as the coordinators of the preparation and realisation of the programs of the social pathological effects prevention at the basic schools. Their activities are watched in the Liberec district, Frýdlant region in concrete, considering its specific needs.

The main aim of this work is to find out the actual situation in the field of social pathological effects prevention at the chosen basic schools in the region and considering the realized characteristics of the Frýdlant region to add insufficiently used contacts, materials and sources. That means to create a short file of information for the basic schools in the region covering other, not yet used, possibilities of education of the school methodists, chance of using dotations and grants for the realisation of the concrete projects of social pathological effects prevention at the schools. Also to find out and show other contacts, materials and possible cooperations with the professional organizations specialized in this field.

The theoretical resource for the concrete research are the complex characteristics of the Frýdlant region, describing the social-economical situation, criminality appearance, present school system, etc. - these are the determinators of the working environment of the school prevention methodists. The local survey took place at 5 basic schools in the Frýdlant region and was used the method of questionnaires and interviews with the prevention methodists.
