

Abstract

Jana Kunhartová

The aim of this work is to summarize current laws and ordinances of the Ministry of Health of the Czech Republic, concerning the medical plants issues.

The work contains the facts about the laws and ordinances, which I compiled regarding their importance for the drugs or natural substances.

The focus is on the development of the official drugs. I have compared the representation of particular drugs and particular galenical substances, which are made of natural materials, in the contents of the formularies from the Czechoslovakian medical codex 1 to the Czech medical codex 2005.

The changes of gradually released codexes in our state naturally reflects the progress in the area of organic and analytic chemistry and in the technology of medicament preparation.

Therefore is possible to observe a certain advancing from the usage of particular drugs to the usage of simple galenical products and the isolated substances.

The medical formularies as the fundamental normative publications are further extended by the laws and ordinances.

I have also focused on the laws given by the Government Institute of the Medical Control, which are related with the medicinal plants area.

This work declares that a great amount of the medical codexes, laws and norms deal with the medical plants or the natural medicaments issues.
