

## Annotation

Bachelor's thesis deals with quality of life with the people after surgery hip joint who were implanted total replacement hip joint. It's divided into two parts theoretical and empiricism. Theory consists of three parts. Part one describes on the problems of total replacement including history total replacement and anatomy of the hip joint. Part two contains on the cure at a spa and part three deals with the quality of life. The empirical part has been treated by a help of the questionnaire research that took part at a spa equipment in Lázně Bělohrad. 55 respondents aged over 50 were addressed. The task of empirical part was to find out if the quality of life would improve after the surgery and a difference before the surgery and after the cure at a spa.
