

Annotation

In the theory part I was dealing with history of resuscitation from the prehistory to Guidelines 2000 and with the recommended procedure in resuscitation guidelines 2005. After that I wrote up the equipment which is used for the advanced cardiopulmonary resuscitation. In the last part I was taking a think about legislativity which is connected with providing the laic and advanced cardiopulmonary resuscitation. The second, empiric part is researching the whole equipment (facilitations, gear and drugs), for cardiopulmonary resuscitation in the regional hospital in Náchod and participation of standards for inspection and usage of this equipment for resuscitation. The questionnaire action was proceeding from 4.12.2007 to 10.1.2008 in regional hospital in Náchod, a. s. by method of personal investigation. I used the questionnaires results for creating two standards. I created standard „Default facilitations, gear and drugs in regional hospital in Náchod a. s.“ and „Methodics of providing cardiopulmonary resuscitation in regional hospital in Náchod a. s.“.
