

## Annotation

The bachelor skript approaches the problematic of geriatric patients. The point out human Society problem, which must be taken care of by older generation. One of the main issues in geriatric patient care is preservation of social welfare, its involvement and return to daily environment. Emphasis should be laid on preservation of dignity in higher age. Gerontologic care has its own specifications. The main objective of this bachelor skript is quantitative investigation of the social environment of geriatric patients. This investigation includes social support, source of information (about medical and social care) and level of independence. The investigated group of patients is created from patients aged 65 and higher, and hospitalized in Faculty Hospital Hradec Králové on Gerontology Metabolic Department. Those patients were willing to fill in the questionnaire.
