

Annotation

Bachelor these is ranged on the quality of life of patients with chronic obstructive pulmonary disease. Theoretical part deals about quality of life itself and simultaneously about disease problems COPD. It deals with its definition, prevalence, symptoms, prognosis, prevention, diagnostics, therapy and even possible developed complications, which this disease could bring.

The purpose of empiric part seems to be discovery of subjective quality of life of patients with COPD. Each patient feels his disease absolutely individually. Important search was realized at quantitative and qualitative research.
