

ANNOTATION

This Bachelor Thesis deals mainly with the issue of rock dwellings in Bohemia. This issue is complemented by the topic of rock dwellings in Europe. The first part of this work is devoted to an introduction to the history of the settlement of sandstone rocks by people, the explanation of the term rock folk architecture and the distribution of rock excavated objects in our territory. In the second part are documented residential and rock farm buildings located in the Bohemia territory, especially in regions of Kokořín and Podralsko. The last part describes in more detail the residential buildings in selected European countries, which represent Slovakia, Italy, Spain and Turkey. The main goal of the whole work is to find out information about rock dwellings in Bohemia and to describe them and to compare these results with the survey of foreign areas. The result of the work is the acquisition of new information about rock settlement in Bohemia, the creation of orientation plans of rock dwellings for selected available rock objects and the final comparison of rock dwellings in Bohemia and selected areas of Europe. To create this work were used methods such as field research, research of studies, secondary literature and oral history.
