

The goal of this work entitled Ectopic pregnancy - etiology, modern diagnostic and therapeutic approach, was to give a complete and complex summary of this topic. Ectopic pregnancy is the most frequently occurring acute abdomen episode in the Czech Republic and it is an important factor of female morbidity and mortality, therefore it deserves special attention.

The paper clearly states the risk factors of ectopic pregnancy together with methods and recommendations for the prevention and therapy of the risk factors. The following part of the text gives the reader a closer look on the different possible clinical forms of ectopic pregnancy. Further, the possibilities of modern diagnosis are analyzed, with a major importance given to the use of ultrasound imaging. The end of the work is given to today's therapeutic possibilities. The condition as a whole, as well as specific situations are described.
