

## **Abstract**

**Title:** Case Study of Physiotherapy Care of Patient with the Diagnosis Fracture of Left Patella

**Objectives:** The aim of this bachelor thesis is to elaborate the theoretical knowledge about the diagnosis fracture of patella and to describe a detailed case report of physiotherapeutic care of a patient with this diagnosis.

**Summary:** This bachelor thesis deals with the diagnosis of left patellar fracture. It is divided into two parts, theoretical and practical. In the first part theoretical knowledge based on kinesiology and biomechanics of the patella are summarised. Then the mechanism of injury, classification and treatment modalities are presented. The second part contains an elaborated case report of a patient after left patellar fracture.

**Keywords:** fracture, patella, case report
