Year of defense:	2022
Keywords:	quality of life of parents, premature babies, diagnosis of premature babies, care of premature babies

The bachelor thesis deals with the quality of life of parents of premature babies, babies born before 37th week of pregnancy, up to 1 year of child. It points out, primarily, how the parents of premature babies are satisfied with their lives and which areas of life are most important for them.

The theoretical part describes the quality of life from different perspectives and methods by which quality of life can be evaluated. It also deals with issues of neonatology and the specifics of care for premature newborns.

The second, empirical part is focused on research using the MGI and SEIQoL methods.

The main goal was to find out and assess the quality of parents life with premature borned baby and to reveal the factors that affect their quality of life.
