Year of defense: 2022

Key words: vaccination, Covid-19, pandemic, immunity, experts, laics

The bachelor thesis examines the attitude to vaccination among health professionals and the general public. The theoretical part is focused on vaccinations in general, it also focuses on Covid-19 and the method of protection against this disease. Describes its diagnosis, clinical signs, symptoms, complications and treatment. He also examines the anti-vaccination movement and the possibilities of influencing people.

The research survey took the form of a non-standardized questionnaire. The questions focused on the differences between the vaccinations of the professional and lay populations. Furthermore, the reasons why people are vaccinated or why they do not want to be vaccinated were evaluated, as well as the ways in which their decisions were influenced.
