Title: Concept of disease in patients with leukemia

Supervisor: Mgr. Jana Matulová

Number of pages: 90

Year of defense: 2022

Keywords: leukemia, concept of disease

The bachelor thesis deals with the subjective view of leukemia patients. The theoretical part first deals with the anatomy and physiology of blood, then the various types of leukemia, nursing care of patients with leukemia, the psychological approach to patients with leukemia and the patient's conception of the disease.

The empirical part is based on a quantitative research survey, which was conducted through an abbreviated Czech version of the IPQ-R-CZ questionnaire supplemented by demographic data of respondents and possible causes of the disease. The study sample consists of patients with a diagnosis of leukemia.
