

## **Abstract**

French Evolutionism in the Light of Modern Science

Author: Pavel Šlégr

This work deals especially on comparison of thinking of two French thinkers-Christian evolutionists of second half of 19th century and first half of 20th century: Henri Bergson and Perre Teilhard de Chardin. My comparison goes on following thematic areas: biography of both thinkers, time and space, overcoming mechanism, causality and teleology, sources, direction and structure of evolution, evolutionism of 19th and 20th century. Next part of this work is devoted to understanding man in work of both thinkers. This work deals also contemporary evolutionism, based especially on statistical methods of work with genes and their models. This work deals also modern physical and cosmological theories and brings them to connection with works of Bergson and Teilhard.
