

Abstract

Title: Case report of physiotherapy care for a patient with a fractured ankle joint

Objectives: The objective of the theoretical part is a detailed introduction to theoretical knowledge and treatment options for ankle joint fractures. The aim of the special part is to become familiar with the course of treatment of a patient diagnosed with a fracture of the ankle joint and with the therapeutic and investigative procedures that were used for the treatment.

Methods: The theoretical part was developed thanks to findings from professional literature, professional articles and information gathered during the bachelor's study of physiotherapy at the UK FTVS. The special part was developed on the basis of data obtained during bachelors practice.

Key words: ankle joint fracture, ankle joint, physiotherapy
