

## **Abstract**

**Author:** Veronika Opršalová

**Title:** The perception of objective and subjective risk of alpine tourism users

**Objective:** Characterization of mountaineering and examination of awareness of the differences between subjective and objective danger.

**Methods:** A questionnaire survey was used to obtain data from respondents, so it is quantitative research.

**Results:** Of the total number of respondents, 86.3% stated that they could distinguish between subjective and objective dangers, which was verified using the following questions. Furthermore, it was found that the participants of mountaineering are aware of their mistakes and try not to repeat them. 61.3% of respondents have become more careful over the years, 30% of respondents have not changed their view of danger over the years and the remaining 8.7% of respondents no longer perceive danger as much as they used to after years.

**Conclusion:** The thesis characterizes mountaineering and deals with its history. It also deals with the perception of subjective and objective danger of the participants of mountaineering. The thesis summarizes information on necessary equipment for mountaineering and trip planning.
