Průběh obhajoby: Michal Nedel'ka presented his thesis "Analysis of consumers'

preferences for cars on Slovak market". During the presentation the student explained the main motivation behind the analysis, he presented the data, the institutional setup, that is, changes in

registration fees and changes in fuel prices, and methods used in the analysis. Michal found that both fuel prices and registration fees have negative effect on the number of car registrations, however the

strength of these relationships differs between types of cars (according to engine type) and between different periods. After the presentation referee's and opponent's reports were summarized and the student had an opportunity to react to their comments. Most of the time was spent on the possibility of reverse causality in the model and the ability of alternative estimation strategies to deal with it. Michal's answers were good and the committee has decided to grade the thesis in accordance with the

supervisor and the opponent.
