

Abstract in English

This paper looks into how climate change is being covered by newspaper media in two Global South countries and two Global North countries – India, the Philippines, Denmark and Australia. While there is some literature on who the main sources are in climate change coverage, as well as how frequently climate change is covered in different countries, there is less literature on how climate change is framed, and how this relates to who the main sources are. Analyzing articles from three newspapers in each country, this content analysis gathered data on what sources are being predominantly used in news articles, and further, how these articles are being framed. It was found that climate change has become a highly politicized issue in the media across most of these countries, and that the main voice in how climate change is becoming to be understood is politicians – except for in Denmark. At the same time, it was found that climate change is mainly being framed as an issue in need of action – except for in Australia.
