

ABSTRACT

The diploma theses deals with aspects influencing the cooperation of parents of hospitalized children and members of a multidisciplinary team of non-medical health professionals during hospitalization at the Department of Pediatric Neurology at the Motol Hospital.

The aim of the thesis is to map these aspects from the point of view of health professionals and the parents of hospitalized children.

The work is divided into a theoretical part and an empirical part. In the theoretical part I deal with theoretical knowledge that relates to the topic. The empirical part is processed by the method of qualitative research, specifically through semi-structured interviews. The obtained data are connected in the discussion with the theoretical framework of the topic. The aspects influencing the cooperation of parents of patients and healthcare professionals identified by the research are intertwined and influence each other, most of them are related to communication between healthcare professionals and parents.

Keywords: *hospitalization of a child, participation, a multidisciplinary team, Motol University Hospital*
