

ABSTRACT

This diploma thesis deals with the issue of sibling relationships in families with intact siblings and siblings with disabilities. It is divided into a theoretical part, which is chapters one to three, and a practical part, which is the fourth chapter. The content of the theoretical part describes the family, parents and siblings. The practical part consists of research, the aim of which is to analyze relationships in the family with a focus on tense situations in the family. A qualitative survey method was chosen for the research and an interview was chosen as the data collection method. Three respondents from the ranks of parents and six respondents from the ranks of siblings were included in the research sample. Part of the empirical part is the analysis of collected data, subsequent evaluation and interpretation. The last part is the conclusion and recommendations according to the data obtained.
