

ABSTRACT

The diploma thesis is devoted to the development of personality and social education at the 1st grade of primary schools. As a tool for this development, I chose the Tiger World® method, which was described by Mr. and Mrs. Kops in their three books. Based on the study of this method and using the principles and means of personality and social education, I created preparations for individual lessons, which I applied in my core class. The knowledge presented in the theoretical part is the starting point for the practical part. In the first part, I define personality and social education, the concept of well-being and the classroom climate. These basic concepts are reflected in the practical part, where the given activities aim to promote well-being and a safe classroom climate. The basis for the given activities is provided by personality and social education, which defines goals, principles and means, and at the same time I am guided by these principles when working with children. The second half of the theoretical part deals with personality typology. Here I define the theoretical basis for the division of personality types according to temperament based on the MBTI theory. I also describe the typology from the Kops family. At the end of the practical part, I characterize two students based on my observation and their reactions, according to the type of temperament and according to the communication types. In the first half of the practical part, I describe the key pillars of Tiger World®. I describe what the books are about and how they came about. In the second half, the author focuses on action teacher research. Based on the author's preparation for the lesson, I teach the given activity and reflect at the end. Inspiration can be drawn from the research for the realization of the goals of personality and social education at the 1st grade of elementary school.
