

The work describes two zootherapy alternatives – canistherapy and hypotherapy. At first; on the theoretical level intents on course of the therapy, on the selection of the suitable animals and on the choice of the experienced therapists. Canistherapy and hypotherapy take advantage of the children, of the handicapped people and the seniors. On basis of practical experience is described the course and the advantage of this therapy with children who suffer from Cerebral palsy. In the conclusion of this work both these animotherapies are compared.
