

Abstract

The Faculty of Science, Charles University in Prague, together with the Prague 10 Youth House organises science camps outside Prague and in Prague, at Faculty of Science, every year. All camp leaders must be trained in occupational health and safety (OSH) before the start of the camp to ensure maximum safety of all participants. So far, temporary material has been used for training, a presentation that did not fully meet the requirements of the camp management. Therefore, the aim of the work was to develop suitable didactic materials for OSH training for leaders at science camps. The theoretical part of the thesis compares presentations on OSH available on internet, which however proved to be unsuitable for the required purpose. The practical part describes the developer products, didactic materials, which can be found in the appendixes. These are a guideline that is primarily intended for the trainer and three presentations that are intended for face-to-face training. The guideline serves as a help for trainers who will offer the training in OSH.
