

## **Abstract**

**Author:** Jiří Ráž

**Supervisor:** Mgr. Gabriela Kočí

**Title:** A case report of physiotherapeutic care for a patient with pubic rami and acetabular fractures

### **Objectives:**

The aim of this bachelor thesis is to provide a theoretical overview of pelvic ring fractures and to record a case report of a patient with this diagnose.

### **Methods:**

The general part includes information about etiology, diagnostics and treatment of pelvic ring fractures. The special part contains a case report of patient, which was created at the Fakultní Thomayerova nemocnice.

**Results:** Both objectives were achieved.

### **Conclusion:**

The recherche found imperfections in currently accesible findings regarding the physiotherapeutic treatment. It may be said, that the therapy infuenced the patient positively and prepared her for the next stages of rehabilitation.

**Keywords:** pelvic ring, acetabulum, trauma, fracture, case report, physiotherapy
