Key words:	adolescence, sexually transmitted diseases, awareness of high school students, sex education, gender identity

This bachelor's thesis focuses on the awareness of sexually transmitted diseases among high school students from the Czech Republic and Ukraine. The thesis is divided into theoretical and empirical parts.

The theoretical part deals with the characteristics of sexually transmitted diseases, their history, diagnosis, prevention, and selected specific infections. It also focuses on barrier methods of contraception, adolescence, gender identity, and sex education in the Czech Republic and Ukraine.

The empirical part compares the level of knowledge about sexually transmitted diseases between students of a lyceum in Ukraine and a grammar school in the Czech Republic.

The research was conducted using a quantitative method with a non-standardized questionnaire. The collected data were subsequently processed into tables and charts.
