

ABSTRACT

Title: Quality of life in wheelchair basketball players

Objective: The aim of this bachelor thesis is to determine the quality of life and life satisfaction of wheelchair basketball players in the Czech Republic who have physical disabilities.

Methods: Preliminary study using standardized questionnaires SWLS-Satisfaction with Life Scale and WHOQOL-BREF were used in order to find the result. 13 wheelchair basketball players aged between 14 and 44 years participated in the study.

Results: A value of 26.85 was measured in the SWLS questionnaire, indicating the respondents' satisfaction with life. The results of WHOQOL-BREF questionnaire showed "good" to "very good" quality of life of the respondents.
