

## **Abstract**

Topic: Training comparison of survival at units 4<sup>th</sup> brigade mechanized infantry

Destination work: This topic is worked up due to determination of contents of survival training at four chosen units of Army Czech Republic. These units are a part of a 4<sup>th</sup> brigade mechanized infantry. The reason of this graduation theses is findings and comparing differences between these units, and propose a motion for training brigade mechanized infantry.

Method: The interrogation method was used for data acquisition. The graduation theses will be based on the information gained from drillmasters and gym instructors for survival training. The information will be gained personally and thanks to structured interview. Information gained, that will be recorded to dictaphone, will be used for my graduation theses without no changes.

Results: After data processing, it was found, that chosen units apply oneself to an area of special physical training. The survival training is used like separated part only in limited factor. Generally, the survival training is a part of drill or complex exercises. The result is, that there is not enough time to dwell on the survival training, so integrated concept was compiled thanks to this information.

Key words: special physical training, survival, brigade mechanized infantry ,Army Czech Republic.
