

ABSTRACT

Title: The Analysis of the Triad Football Tennis Championship Focused on Laterality

Aim of thesis: Analysing of the individual play activity in term of the preference of the legs depending on laterality of the players

Methods:

- videorecords
- match observation
- analysis of the literature
- laterality testing

Results:

- The rule modification to one-impact game has not brought any important change with view of the leg preference.
- A lower number of the players are involved of the forward activity in the one-impact game
- The one-impact game does not force the players to use the undominant leg more frequently.

Keywords:

- football tennis
- one-impact and two impact game system
- laterality, Pateral laterality
- pitcher, smasher, defender, picker
- individual play activity
