

Abstract:

Title (Theme works): Zone defence scenarios

Student: Kohoutek Rostislav

Supervisor: PhDr. Mario Buzek, CSc.

Aim: On the base of the analysis of scored goals in UEFA Champions league 2008/2009, specify certain defence scenarios. These defence scenarios will be detailed described and analysed. The reached knowledge will be applied into training process.

Methods: Project research was executed by the indirect observation method: watching football videos. The qualitative and quantitative analyses were used. The study is composed by all scored goals in UEFA Champions league during the 2008/2009 season, when the European Football Federation UEFA DVDs materials were used.

Results: As the result several certain defence scenarios, occurred in UEFA Champions league 2008/2009, were specified. On the base of the survey of all scored goals, the defence demanding situations were analysed. The established defence scenarios were detailed described and used in training process on adequate competitive level.

Key words: Defence demanding scenarios, received goal, pressing, qualitative and quantitative analyses, UEFA Champions League,
