

My thesis with its topic The Integration of the Czech Republic to the European Union presents the study material for teachers from the Civics and Humanitarian basis. The author draws from the experience and due to this, she created comprehensive material. The emphasis is placed on the connection theoretic information with the practice. The thesis is divided into two parts - theoretic - educational material including historian thoughts of the European integration, the foundation of the European Union and the development of the admission of the Czech Republic to the European Union. The practical contains the analysis of the topic with respect to the contemporary conception of the teaching (General Educational Programme), gathering different types of available educational materials and information sources, its classification and at the conclusion the concrete example of the lesson. The main contribution of the thesis is exactly in this part, which draws the attention at the same time on vast bulk of material. This material does not always correspond, so we have to classify it. The first part is the base for the second part.

The thesis adverts to the need of the incorporation important, actual and various topic Integration of the Czech Republic to the European Union to the lesson. This incorporation has to serve to the students, they should create their own attitude and opinion on the events in EU and membership CR in EU. They should understand various parts of the membership in which we are involved. Other important thing is their way on the participation in EU. The thesis also offered the bases, materials and the possibilities of the lessons.
