Assessment of topics:

	above average	average	under average
Technical knowledges		x	
Statistics and their processing		x	
Research methods		x	

Classification of thesis

Classification of thesis	stupeň hodnocení			
	excellent	very good	satisfactory	unsatisfactory
Aim of work fulfilment	x			
Performance of student during process of work	x			
Instruction of work		x		
Literature and citations		x		
Use of used methods		x		
Quality of work (text, graphs, tables)	x			
Level of work		x		

Assessment of the thesis outcomes:

	under average	average
--	---------------	---------

Comments and questions to answer:

Practical part widened knowledges about the clinical examination and treatment of ACL rupture. Practical part documentation of treated patient. Q: Why is so important to assure the full extension in the knee joint after ACL rupture? And what will you recommend if your patient will not be able to make full extension 1 month after the surgery?

Recommendation for defence:

yes	no
