4. Usefulness of the thesis outcomes: under-average average

5. Comments and questions to answer:
   Theoretical part is based on a low number of literature. Construction of theoretical part is to general. Q1: Which objective method could be used for the diagnostic of knee ligaments lesions? Why the fixation of distended segment is so necessary in acute state and how long is the fixation usually indicated?
6. Recommendation for defence:  

7. Designed classificatory degree
