

**TITTLE:**

Motorial Performance of Young Football Players in Age between 12 and 13 Years

**AIM OF ASSESSMENT:**

The aim of this thesis is to find out motorial performance and physical skills between young football players in age between 12 and 13 years and connection between these skills and training plans in their clubs.

**METHOD:**

This Diploma thesis uses empirical quantitative research which took part in standardized conditions.

**RESULTS:**

The results show, that all tested players reached at least the result „Above standard“ in testing their motorial performance. Another results show, that these results are in connection with training plans in clubs.

**KEY WORDS:**

Motorial performance, secondary school age, testing motorial performance of football players, UNIFITTEST 6-60
