

This thesis entitled "Czech and Russian phrasemes containing components of the universe and celestial bodies" has for its object to gather and explore as large as possible number of phraseologisms containing the components on the theme of space and celestial bodies.

It consists of several parts. In the theoretical part we engaged in phraseology as science, in some attitudes to it, in definition of phrasemes and different classifications that were created by Czech and Russian philologists.

In the second part we analyzed the grammatical structure of Czech and Russian phrasemes and classified them according to their structures.

In the third one we dealt with stylistic characteristics of Czech and Russian phrasemes, divided them according to stylistic characteristics of the whole phrasemes having regard for stylistic characteristics of particular component.

The last part of our work is dedicated to the comparison of Czech and Russian equal phrasemes that we divided on the basis of relationship of these equivalents and their components. We explained particular phrasemes and their origin. In case the origin was not evident we had tried to explain it too. Most of those Russian phrasemes we explored has its equivalent in Czech vice versa. However, some of them have to be translated periphrastically.
