

Topic of diploma thesis	Modern approaches to breast cancer treatment
Student's name	Davoud AHMADIMOGHADDAM
Supervisor	Doc. PharmDr. František Štaud, Ph.D.

I. Supervisor's appraisal of Davoud AHMADIMOGHADDAM

Davoud AHMADIMOGHADDAM has elaborated a diploma thesis named „Modern approaches to breast cancer treatment“. In his work, Davoud covers many aspects of breast cancer, including breast biology and physiology, etiology of breast cancer and its risk factors. The main focus of the diploma thesis lies in the treatment strategies, covering traditional as well as latest approaches.

While working on his diploma thesis, Davoud was a very active and reliable student. He has assembled a large number of recent publications and other information sources and incorporated them into his thesis. He was willing to accept my advice and criticism, but he also brought up many interesting points of his own.

I consider the diploma thesis of Davoud AHMADIMOGHADDAM excellent.

Classification **excellent**
