Summary

Social work is a profession that in light of the growing number of social problem is going to be indispensable. It is important to be focused not just on the profession itself but also on the educational institutions that are providing the training and education to on-coming social workers. Principal aim of this thesis is to find out what kinds of exercise have students of the Department of Social work of FF UK that graduated in years 2005 to 2008. Further aim was to provide general information about the current position of the Social worker profession and also to provide complex summary about the selected education programs of Social work at Czech Universities.

This thesis is dissertating about the profession of the Social worker in general. It is focused on professionalization of Social work in Czech Republic, on its conception as a human science branch and also about the role of the vocational association in this case. It is also providing compact summary about the possibilities of university education in Social work. In total are in Czech Republic 17 Faculties on 11 Universities, where is possible to study Social Work. More detailed are described the activities, the concept and actual situation on the Department of Social Work, Faculty of arts, Charles Univerzity in Prague.

The outputs from research that was about "The exercise of the graduates of KSP FF UK from 2005 to 2008" were detailed researched as well as their satisfaction with the education on KSP FF UK. The results confirmed that absolute majority of the graduates found their job and that majority is well-contented with their job. The satisfaction with the education was reviewed as the average level of placidity. The outputs from this research should be used as a feed back for the department.

Key words: social work, graduate, KSP FF UK, exercise
