

Resumé

State funds with focus on State fund of traffic infrastructure

My diploma work is about state funds and especially on the theme The State fund of traffic infrastructure. My work has two bigger parts. In the first part are generally funds and state funds. In the second part I'm focusing my work directly on The State fund of traffic infrastructure. I explain a meaning of word "fund" at the beginning of my diploma work and then a system of funds (I try to show the grade of state funds between other funds). Next I deal with state funds' problems. There I generally describe state funds and try to show constituents, which have all state funds. After that follows a recitation of state funds and a part about each of them (except of The State fund of traffic infrastructure). I describe main impositions, an organization, a budget, receipts and expenditures of state funds. Then I attend to The State fund of traffic infrastructure. At the beginning of this part I describe a common interpretation about it, main impositions, an organizational structure (names of corporate members in each authority of fund) and a budget. The second part is divided into four sections:

- 1) Common interpretation about The State fund of traffic infrastructure (main impositions, an organization, a budget).
- 2) After that follows part about Transport policy 2005-2013 and Construction of motorways. There I describe preferences and aims. Hence it follows ideas of development in our traffic infrastructure. I try to describe ways of financing motorways and roads.
- 3) In the next part I describe legal regulations and concrete numbers of receipts of fund in each year and their evolution.
- 4) In the last part I describe concrete numbers of expenditures of fund in each year and their evolution.

I don't forget the essential influence of financial instruments, which are provided from European Union. There are in form of contribution and loans from European funds.
