

A detail study of ancient coin finds in Bohemia made possible to compile their catalogue. The surveyed 50 971 square kilometre, \ region of Bohemia was a part of Barbaricum that time (distance from the Limes Romanus was minimally 30 kilometre:). Of the total number 01841 separate records 768 finds are registered from here. No less than 5032 coins are known from Bohemia 3349 of which are at least approximately described. Greek coin finds related to the La Tene period are represented just scantily here. A small part of Roman republican coins is also connected with this time, most of them, however, coincide with the Roman period. An absolute majority of the find fund is formed by Roman imperial coins which got into Bohemia during the Roman period and the older stage of the Migration of the Nations. Beside single coin finds also depots and settlement finds are represented in larger number here. The occurrence of imported ancient coins on the territory of Bohemia is concluded with Byzantine nominals from the 6th and 7th centuries. The complete catalogue listing documents an important position of Bohemia within Central Europe where this problem has been a subject of considerable attention for a long time.
