

Annotation

This paper deals with a true story about Mrs. L. B.'s life, who is dependent not only on invalid chair but on fan too.

The theoretical part deals with problems of life quality – there are elaborated life quality aspects, factors that influence life quality, measuring and ways of evaluation of life quality.

The main chapter deals with home mechanic ventilation (it includes forms of ventilation, possibilities of nursing care, possible complications), it deals with the project of home mechanic ventilation too (its realization, nursing care about ventilated patient). Integral part is made by information obtained from Home care agencies.

The practical part is based on qualitative research. The main goal is to show life and life quality of a person who is dependent on fan by his/her eyes. Data were obtained by nonstandardized or half-standardized interviews with Mrs. L. B., Mr. B. B., and nurse from Home care agency. They were completed and specified in assist with Mr. B. B.'s diary where the period of Mrs. L. B.'s hospitalisation is described.
