

Annotation

This thesis is focused on the quality of life of patients with epilepsy. The theoretical part contains information about epilepsy, definition and treatment. There is also explanation of „quality of life“ in general and quality of life with epilepsy. The next empirical part includes survey performed on patients with epilepsy. In order to find out the perception of own quality of life with epilepsy, has been used a specific questionnaire for patients with epilepsy. Finally, in the last part, there is a summary of the survey's results.
