

Annotation

This bachelor's research thesis is focused on the toddlers' injuries and their prevention. The main goal of this research is to find out if parents are informed about injury prevention at this particular stage of the child's life.

The work stresses the seriousness of this topic. This work is based on statistical data from childhood injuries.

The main part of this work is a survey of the circumstances of children's injury prevention. The research sample consists of parents in the Hradec Králové area who have children between the ages of one and three.

The research survey took place over a seven month period.
