

Annotation

The theoretical part of my bachelors' thesis deals about development of resuscitation procedures from the first written note to the present. I also describe most frequent acute conditions and CPR procedur by Guidelines 2005.

The second, emipiric part is researching about level of knowledges of non medical hospital attendants. The questionnaire action was proceeding from 10. 12. 2008 to 12. 2. 2009 in Regional Hospital in Jičín. The research was realized by the form of an anonymous questionnaire survey. The respondents were non medical hospital attendants from 11 departments these hospital.
