

The thesis is focused on environmental education and training on primary school. It should contribute to problem solving how to include environmental education in educational process on primary school. The thesis deals with the description of the project, which is focused on production and materials recycling. The pupils from fifth classes have successfully realized this project during two years. In conclusion it is possible to say that one of the most effective way, how to integrate environmental education and training on primary school is the project method and work with critical thinking method.
