

The aim of the diploma thesis is to describe the system of cooperation between the NGOs and Prague 7 City district on the field of providing the services of anti-drug prevention. In September 2008, the pilot project of Prague centre of primary prevention was started. If the project is successfully realised, it is expected, that the cooperation between the NGOs and particular Prague city districts will be systematized. Firstly, the thesis briefly introduces the activities and the status of two workers, who are responsible for the collaboration with the NGOs, that provide the preventional activities. These workers are: the school methodist of drug prevention and the anti-drugs coordinator. Then the attention is paid to their „anchorage“ within the scheme of anti-drugs politics in the Czech Republic and their relationship with the NGOs. The following part of the thesis is devoted to the process of the certification, that is an important instrument for the NGOs to get the money from the state budget. One of the chapters deals with the laws, strategical and methodical documents, that refer to the implementation of the anti-drugs prevention. I chose two organizations to make a survey with them. These organizations provide almost identical services in the Prague 7 area. I made the interview with the representatives of these organizations. The survey showed, that the interviewees share the similar views on the system of cooperation with the Prague 7 city district. They lack the communication platform and the non-sufficient financing.
