

The B.A. thesis deals with the issue of settlement development on the acropolis of the Early Medieval hillfort at Libice nad Cidlinou. Main part of the work consists of analysis and evaluation of the “trench S” that was excavated in the year 1950, and whose results have not yet been analyzed in detail. Essential part of this work is dedicated to analysis of the collection of finds and to methodology of processing the data obtained during this old archaeological excavations. On the basis of the analysis results, taking the latest results of non-destructive research into consideration, this thesis opens discussion regarding the theories of Rudolf Turek concerning the settlement development of the acropolis. So far, Turek’s theories have not been discussed in detail. In its close, this B.A. thesis is supplemented with comparative overview of settlement areals and their forms attested both on Czech- and Great Moravian hillforts that share similar characteristics with the hilfort at Libice nad Cidlinou.
