

Bachelor thesis „Comparison of climate change policy of the United States and People’s Republic of China between 2004 and 2009“ deals with a development, main actors and key documents of two above mentioned countries between years 2004 and 2009. Contrary to different social-economic conditions, political system or rhetoric, the two governments had, surprisingly, a lot of in common in their stance towards climate change or policy of mitigation. They were unwilling to curb their GHG emissions mandatorily but they supported renewable resources of energy, improvements of energy intensity in industry, improvements of energy efficiency and implementations of
