

My bachelor work is concerned with the archeological finds processing from Late Hallstatt to Early La Tene age. The finds have been discovered during rescue archeological research in poly-cultural residential area in Vrábí- Brandýs nad Labem. The aim of my work is to make systematical and synoptic processing of archeological materials, subsequently explicate the finds and place the residential area in the context of time and place. The emphasis is placed to utilize the findings with maximum efficiency and to make it possible to compare archeological data from other localities.
